

Task 2: Ensure that you have a windows-based domain environment (with a DC & Member).
Create a group policy and apply it on the all the computers that are domain joined.
This policy basically applies the same wallpaper in all the computers within the domain.

Hint:

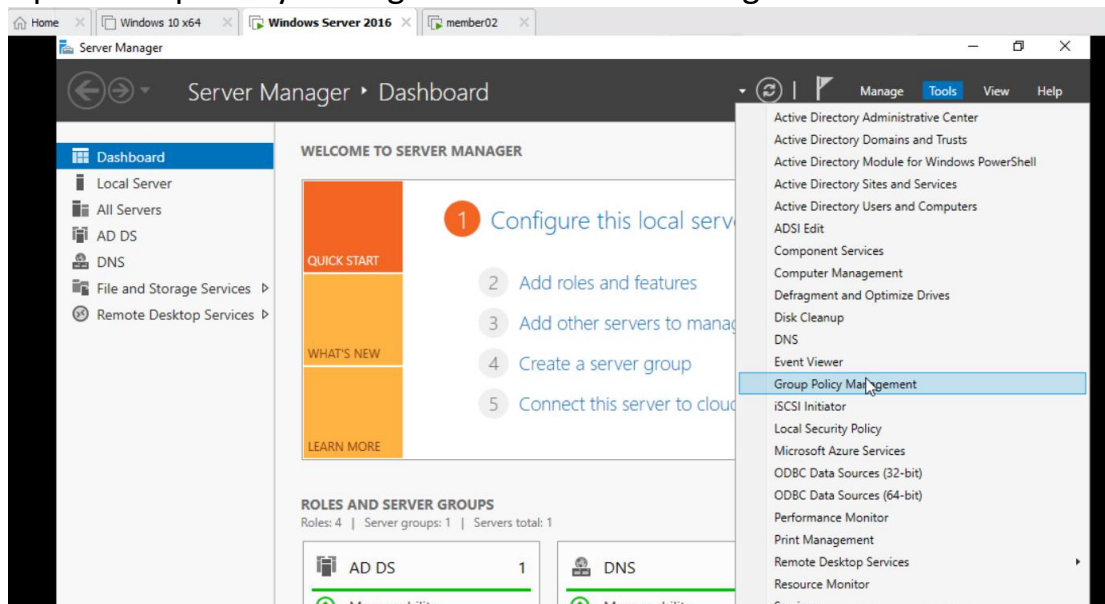

install 2 server or 1 server & 1 client.
make 1 of them as domain controller
on DC, create a group policy & apply it on the OU.
verify the wallpaper on member machine (GUI).

Solution-

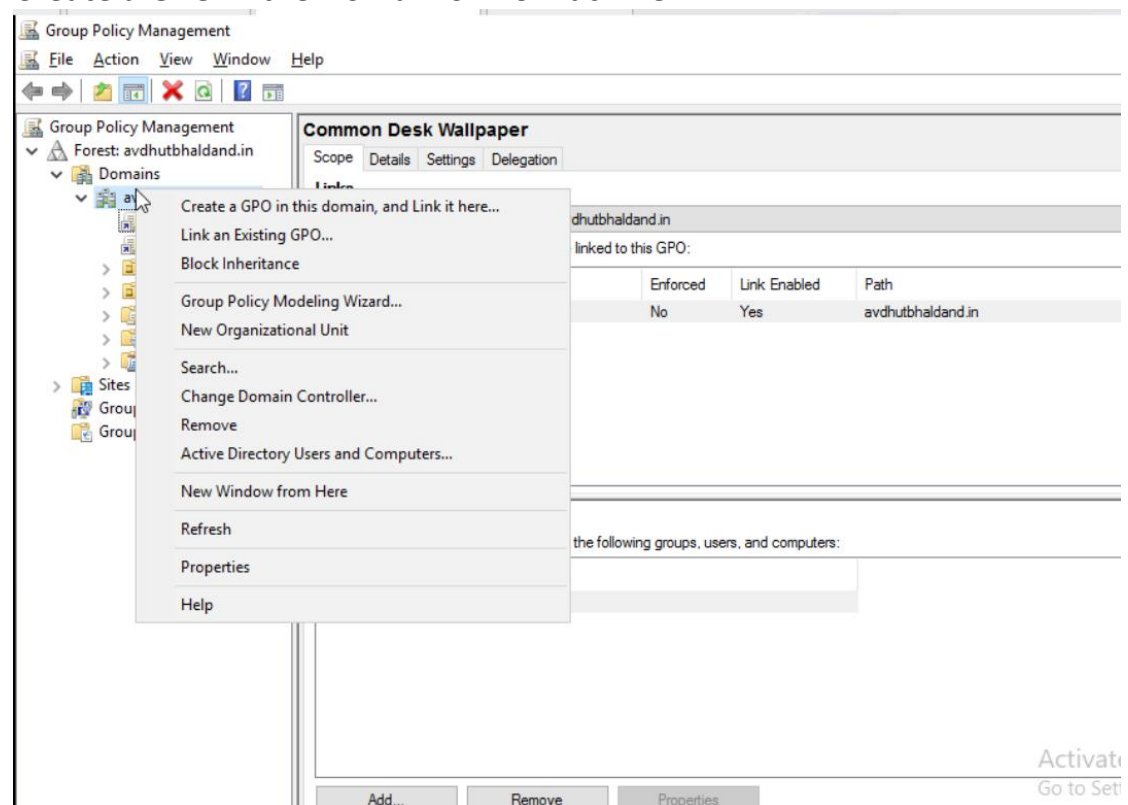

Create a folder in C Drive add a wallpaper in it.

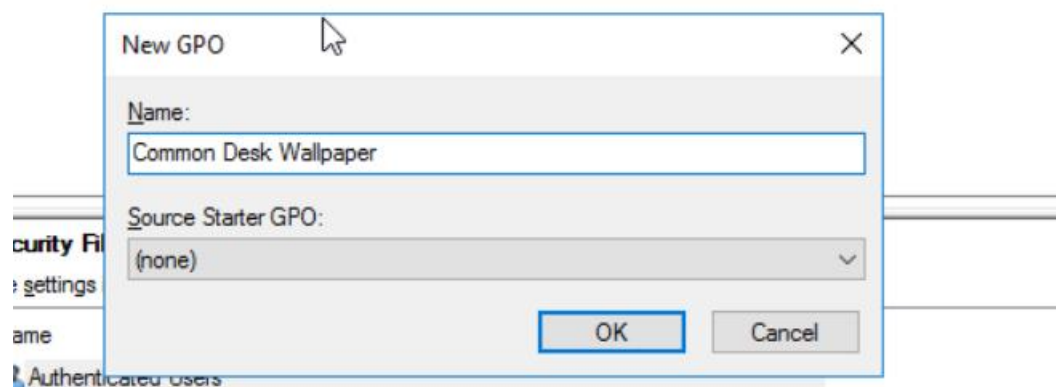

Open Group Policy Management in Server Manager.

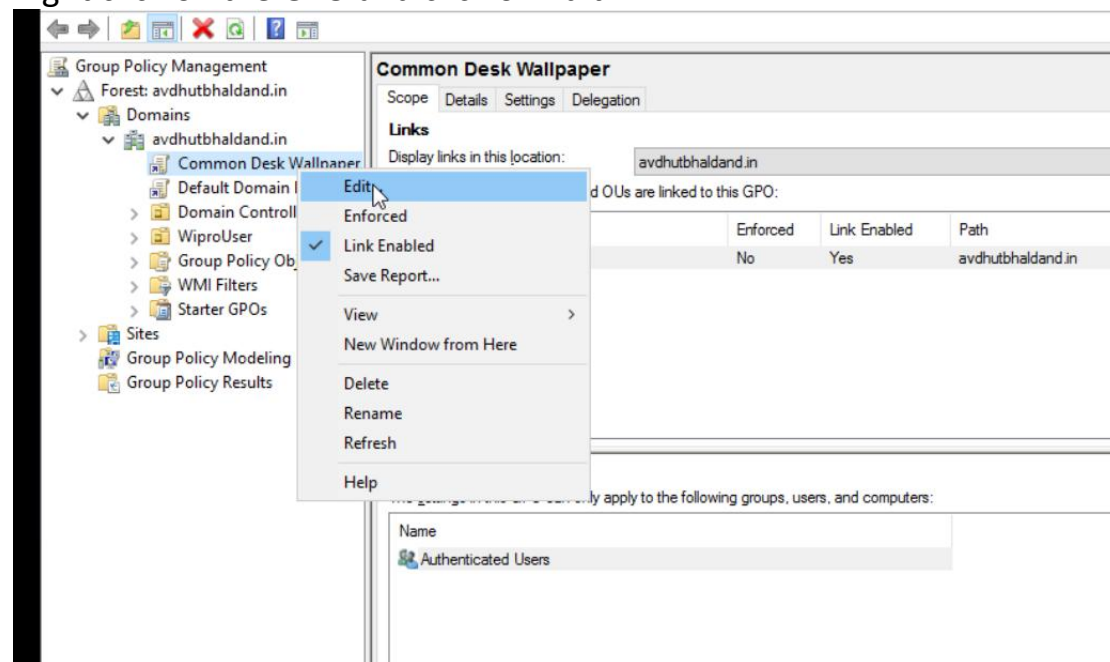

Create a GPO in the Domain of DC machine-

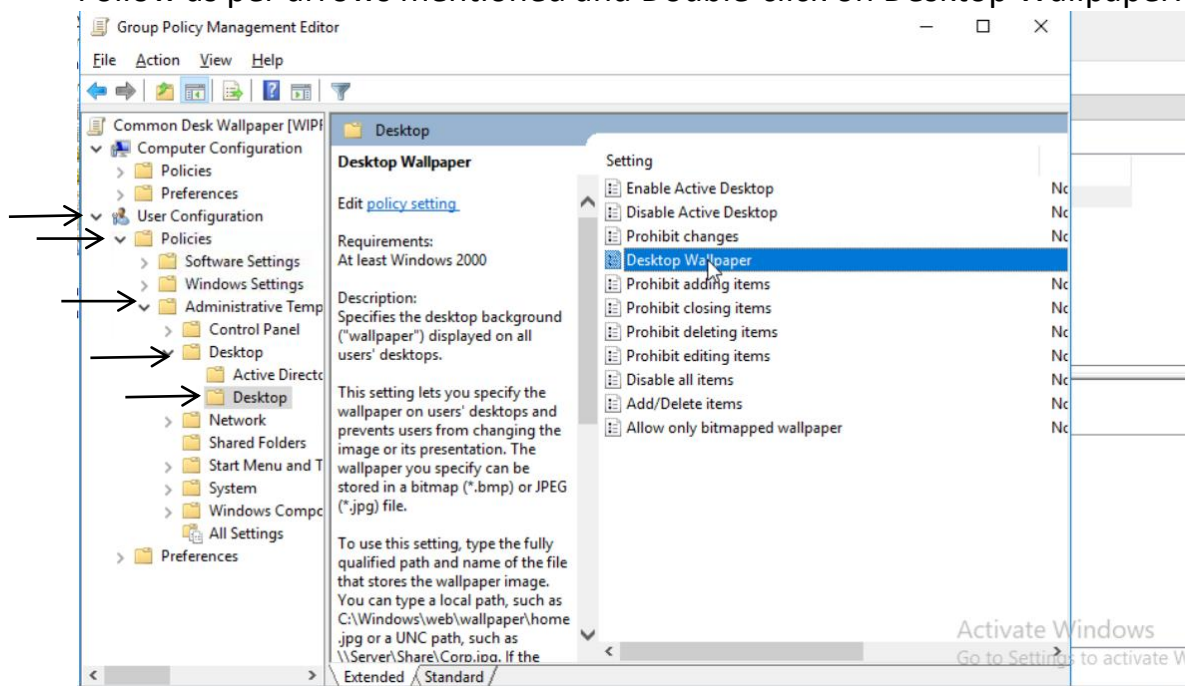

Specify the name to GPO.

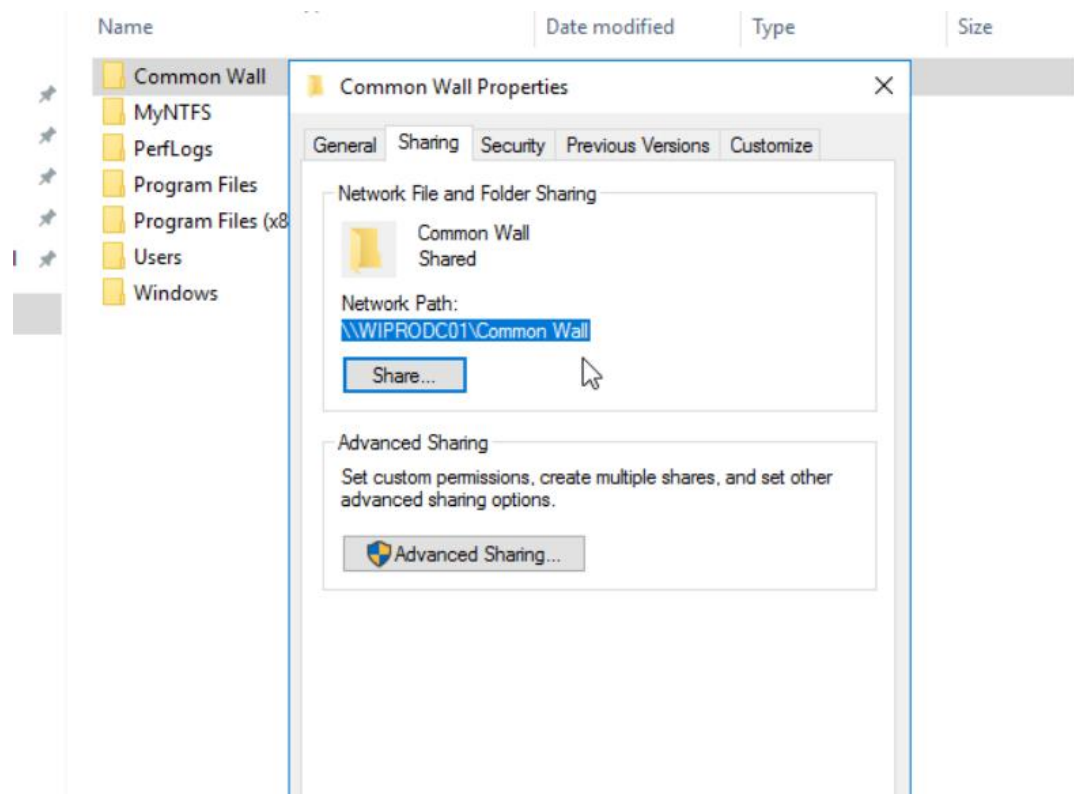

Right click on the GPO and click on Edit.

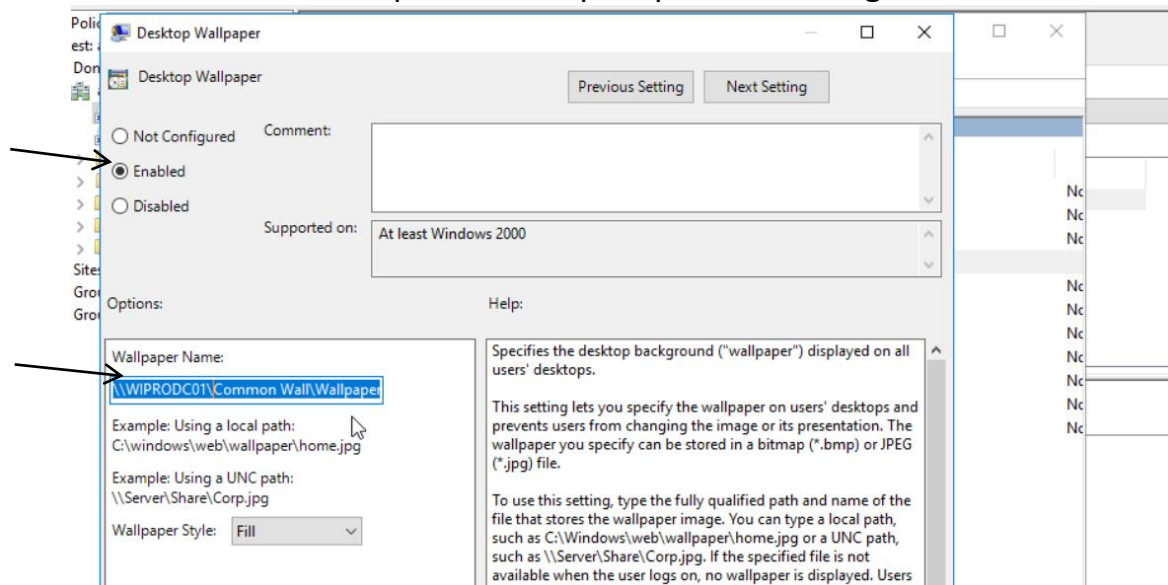

Follow as per arrows mentioned and Double-click on Desktop Wallpaper.

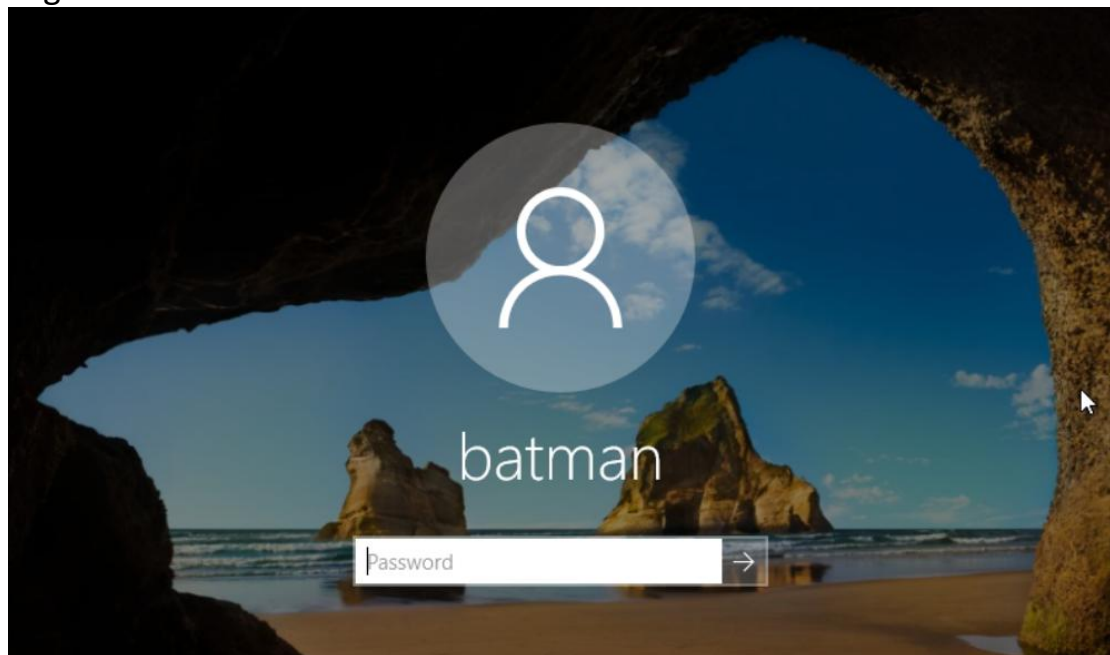

Copy the path of the Wallpaper folder.

Click on Enabled and paste the copied path with image name.

Login to the member machine .

Specified Wallpaper on the dc machine gets applied on client machine.
